

MISCELLANEOUS NOTE

Atteva punctella Cramer (*aurea* Fitch).—One specimen and two small colonies of larvæ on *Ailanthus*, observed by the writer at Pound Ridge Reservation, Westchester County, New York, August 22, 1931.

Eudiotis nitidalis Cramer.—One specimen collected at Mastic, Long Island, New York, about September 13, 1931, by D. G. Nichols.

Only one record is given for both of the above species in Smith's Insects of New Jersey, and the New York State List.—Frank E. Watson.
